

## Mineral Management

The Performance Plus Mineral Management program guarantees organic minerals that are better absorbed, stored and utilized by the animal, and are, thus, better able to meet the higher nutrient needs of modern livestock for rapid growth, maximum reproductive performance and optimal animal health. Further, Total Replacement Technology (TRT) corresponds with the global environmental benefits of reduced mineral excretion.

## Gut Health Management

The Performance Plus Gut Health Management program is essential for building a foundation for performance and profitability in beef production. Healthy animals will eat and produce more efficiently, ensuring they are performing at their maximum potential. The gut health management program focuses on supporting animal performance by promoting good bacteria, building defenses and maximizing growth and efficiency.

### Nutritional phases of gut health:

- The right start: Promote good bacteria, enhance gut development and support early growth
- Getting the most from your feed: Maximize feed utilization, growth and efficiency
- Building immunity: Build defenses, address colonization of pathogens and support weight gain
